EASA eRules: aviation rules for the 21st century

Rules are the core of the EU civil aviation system. The aim of the **EASA eRules** project is to make them **accessible** to stakeholders in an efficient and reliable way.

The **EASA eRules** is a comprehensive, single system for structuring, sharing, and storing of rules. It is the single, easy-access online database for all aviation safety rules applicable to European airspace users.

The **Easy Access Rules** (**EAR**) are the output of the eRules project. They are consolidated versions of those rules, combining EU regulations with EASA certification specifications (CSs), acceptable means of compliance (AMC), and guidance material (GM) in an easy-to-read format with advanced navigation features through links and bookmarks. EAR are regularly updated, following the adoption of an official publication.

The EAR are available:

- in PDF format;
- as dynamic online publications (online format) with a wide range of functionalities, such as filters to obtain regulatory material tailored to one's needs, a search function through the table of contents to quickly access the relevant sections, and easy navigation for computers, tablets, and mobiles; and
- in XML (machine-readable format) that can be easily processed and automated by recipients, producing output that is compatible and can be synchronised with local applications, search databases, etc.

The **EASA eRules** system is developed and implemented in close cooperation with the Member States and aviation industry to ensure that all its capabilities are relevant and effective.

DISCLAIMER

This document is issued by the European Union Aviation Safety Agency (referred to as both 'EASA' and 'the Agency') to provide its stakeholders with an updated, consolidated, and easy-to-read publication. It has been prepared by putting together the officially published EU regulations with the related EASA certification specifications (CSs), acceptable means of compliance (AMC), and guidance material (GM) (including their amendments) adopted so far. However, this document is not an official publication, and EASA accepts no liability for damage of any kind resulting from the risks inherent in its use.

NOTE FROM THE EDITOR

The content of this document is arranged as follows: the cover regulation (recitals and articles) of the implementing rule (IR) or delegated rule (DR) appears first, then the IR or DR annex points, followed by the related acceptable means of compliance (AMC) and guidance material (GM).

In case of certification specifications (CSs), a CS is followed by the related GM.

All elements (i.e. articles, IRs, DRs, CSs, AMC, and GM) are colour-coded and can be identified according to the illustration below. The EU regulation or EASA Executive Director (ED) decision through which the article, IR, DR, CS, AMC, or GM was introduced or last amended is indicated below the article, IR, DR, CS, AMC, or GM title *in italics*.

COVER REGULATION

COMMISSION REGULATION (EU) 2015/340

of 20 February 2015

laying down technical requirements and administrative procedures relating to air traffic controllers' licences and certificates pursuant to Regulation (EC) No 216/2008 of the European Parliament and of the Council, amending Commission Implementing Regulation (EU) No 923/2012 and repealing Commission Regulation (EU) No 805/2011

Powers and recital

Regulation (EU) 2023/893

THE EUROPEAN COMMISSION,

Having regard to the Treaty on the Functioning of the European Union,

Having regard to Regulation (EC) No 216/2008 of the European Parliament and of the Council of 20 February 2008 on common rules in the field of civil aviation and establishing a European Aviation Safety Agency, and repealing Council Directive 91/670/EEC, Regulation (EC) No 1592/2002 and Directive 2004/36/EC¹, and in particular Articles 8c(10) and 10(5) thereof,

Whereas:

- (1) Air traffic controllers and persons and organisations involved in their training, testing, checking and medical examination and assessment must comply with the relevant essential requirements set out in Annex Vb to Regulation (EC) No 216/2008. In particular, they are to be certified or licensed once they have demonstrated compliance with the essential requirements.
- (2) The European licence has proved to be an effective way of recognising and certifying the competence of air traffic controllers, who as a profession play a unique role in the operation of safe air traffic control. The Union-wide competence standard has reduced fragmentation in this field and thus contributed to more efficient organisation of work in the current context of increased regional collaboration between air navigation service providers. Maintaining and improving the common licensing scheme for air traffic controllers working in the Union is an important part of the European air traffic control system. To this aim, technical requirements and administrative procedures related to air traffic controllers' licences and certificates, reflecting the state of the art in this domain, should now be laid down.
- (3) The provision of air navigation services requires highly skilled personnel and in particular air traffic controllers, whose competence is demonstrated by a licence, issued on the basis of the detailed requirements set out in this Regulation. The rating on a licence should indicate the type of air traffic service an air traffic controller is competent to provide. The endorsements on the licence should reflect both the specific skills of the controller and the authorisation given by the competent authorities to provide services for a particular sector, group of sectors and/or working positions.

.

¹ OJ L 79, 19.3.2008, p. 1.

- (4) The authorities performing supervision and verification of compliance under this Regulation should be sufficiently independent from air traffic controllers when issuing licences or extending the validity of the endorsements, when suspending or revoking licences, ratings, endorsements or certificates in cases where the conditions for their issue are no longer met. Those authorities should also be sufficiently independent from air navigation service providers and training organisations. They should remain capable of performing their tasks effectively. The competent authority or authorities charged with the responsibility set out in this Regulation may be the body or bodies designated or established in accordance with Article 4 of Regulation (EC) No 549/2004 of the European Parliament and of the Council¹. The European Aviation Safety Agency (hereinafter the 'Agency') should act as the competent authority for issuing and renewing certificates held by air traffic controller training organisations located outside the territory of the Member States and, where relevant, their personnel. As such, it should meet the same requirements.
- (5) In light of the particular characteristics of air traffic in the Union, common competence standards for air traffic controllers employed by air navigation service providers should be introduced and effectively applied, ensuring air traffic management and air navigation services (ATM/ANS) to the public.
- (6) Member States should have the possibility to apply this Regulation to their military personnel providing services to the public, as referred to in Article 1(2)(c) of Regulation (EC) No 216/2008.
- (7) Poor communication is often a significant contributing factor in incidents and accidents. Therefore, detailed language proficiency requirements for air traffic controllers should be laid down. Those requirements are based on the requirements adopted by the International Civil Aviation Organization (ICAO) and provide a means of enforcing these internationally accepted standards. The principles of non-discrimination, transparency and proportionality are upheld with regard to language proficiency requirements in order to encourage free movement of workers, while ensuring safety. The validity of language proficiency endorsement should be proportionate to the proficiency level as determined in this Regulation.
- (8) Common rules for issuing and maintaining licences for air traffic controllers are essential to increase Member States' confidence in each other's systems. To ensure the highest level of safety, uniform requirements for the training, qualifications and competence of air traffic controllers should therefore be introduced. This also serves to ensure the provision of safe, high-quality air traffic control services and it contributes to the recognition of licences throughout the Union, thereby increasing freedom of movement and improving the availability of air traffic controllers.
- (9) The European Organisation for the Safety of Air Navigation (Eurocontrol) has set appropriate standards for initial training, set out in the Specification for the ATCO Common Core Content Initial Training. In order to reflect the scientific and technical progress and to facilitate a uniform approach to initial training, which is the key element for ensuring mobility among air traffic controllers, these standards should now be set out in Union law. Requirements should also be established for unit and continuation training, taking into account the applicable essential requirements as specified in Article 8c of Regulation (EC) No 216/2008. In the absence of European training requirements, Member States may continue to rely on training standards developed by ICAO.

Regulation (EC) No 549/2004 of the European Parliament and of the Council of 10 March 2004 laying down the framework for the creation of the single European sky (OJ L 96, 31.3.2004, p. 10).

- (10) In consultation with a group of experts, Eurocontrol has developed requirements for medical assessment of air traffic controllers, which have already been used by Member States together with ICAO Annex 1. Those requirements should now be transposed into Union law in order to ensure their uniform application in all Member States.
- (11) In order to ensure that Member States fulfil their safety responsibilities and obligations in a correct and structured manner by means of an administration and management system operated by competent authorities and organisations acting on their behalf, in line with ICAO State Safety Programme, this Regulation should stipulate the requirement to be applied by the competent authorities.
- (12) The certification of training organisations is one of the essential factors contributing to the quality of air traffic controller training and thus to the safe provision of air traffic control. The requirements for training organisations should therefore be strengthened. It should be possible to certify training according to the type of training, as a package of training services or as a package of training and air navigation services, without losing sight of the particular characteristics of the training offered by each organisation.
- (13) The general conditions for obtaining a licence, insofar as they relate to age and medical requirements, should not affect the holders of existing licences. In order to preserve existing licence privileges and provide smooth transition for all licence holders and for the competent authorities, licences and medical certificates issued by Member States in accordance with Directive 2006/23/EC of the European Parliament and of the Council¹ and with Commission Regulation (EU) No 805/2011² should be considered as having been issued in accordance with this Regulation.
- (14) For the sake of consistency, the definition of psychoactive substance in Commission Implementing Regulation (EU) No 923/2012³ (3) should be amended.
- (15) While this Regulation builds on previous achievements and EU regulatory requirements, for the sake of clarity, Regulation (EU) No 805/2011 should be repealed.
- (16) In accordance with Articles 17(2)(b) and 19(1) of Regulation (EC) No 216/2008, the Commission has been assisted by the Agency when preparing the measures provided for in this Regulation.
- (17) The measures provided for in this Regulation are in accordance with the opinion of the Committee established by Article 65 of Regulation (EC) No 216/2008,

HAS ADOPTED THIS REGULATION:

[applicable until 3 August 2024 - Regulation (EU) 2015/340]

Directive 2006/23/EC of the European Parliament and of the Council of 5 April 2006 on a Community air traffic controller licence (OJ L 114, 27.4.2006, p. 22).

Commission Regulation (EU) No 805/2011 of 10 August 2011 laying down detailed rules for air traffic controllers' licences and certain certificates pursuant to Regulation (EC) No 216/2008 of the European Parliament and of the Council (OJ L 206, 11.8.2011, p. 21).

Commission Implementing Regulation (EU) No 923/2012 of 26 September 2012 laying down the common rules of the air and operational provisions regarding services and procedures in air navigation and amending Implementing Regulation (EU) No 1035/2011 and Regulations (EC) No 1265/2007, (EC) No 1794/2006, (EC) No 730/2006, (EC) No 1033/2006 and (EU) No 255/2010 (OJ L 281, 13.10.2012, p. 1).

THE EUROPEAN COMMISSION,

Having regard to the Treaty on the Functioning of the European Union,

Having regard to Regulation (EU) 2018/1139 of the European Parliament and of the Council of 4 July 2018 on common rules in the field of civil aviation and establishing a European Union Aviation Safety Agency, and amending Regulations (EC) No 2111/2005, (EC) No 1008/2008, (EU) No 996/2010, (EU) No 376/2014 and Directives 2014/30/EU and 2014/53/EU of the European Parliament and of the Council, and repealing Regulations (EC) No 552/2004 and (EC) No 216/2008 of the European Parliament and of the Council and Council Regulation (EEC) No 3922/91¹, and in particular Article 50, Article 53, Article 62(14) and (15) and Article 72(5) thereof,

Whereas:

- (1) Commission Regulation (EU) 2015/340² lays down the technical requirements and administrative procedures relating to air traffic controllers' licences and certificates.
- (2) The limited flexibility and availability of air traffic controller resources in the Union restrict the capacity of the European Air Traffic Management ('ATM') system. Therefore, adaptations to the regulatory framework concerning the licensing and qualification of air traffic controllers are needed.
- (3) With the aviation industry rapidly evolving, Regulation (EU) 2015/340 needs to be updated to ensure that it is fit for purpose, cost-effective and in line with the globally applicable standards and practices. It is important to establish a lean system of qualifications without any overlaps. The update of the initial training syllabi should ensure an adequate alignment to the regulatory framework and operational needs.
- (4) The European Union Aviation Safety Agency ('the Agency') considers that military air traffic controller trainings currently provided in the Member States could provide for a high level of safety and are comparable to the civil air traffic controller training requirements laid down in Regulation (EU) 2015/340. Therefore, national military air traffic controller trainings should be taken into account for the issuing of Union air traffic controller licences.
- (5) Upon application for a conversion of a national military air traffic controller licence, a student air traffic controller licence can be issued provided that the military initial training experience of the applicant meets the initial training requirements set out in Regulation (EU) 2015/340 based on the national conversion report and after the completion of any additional training resulting from the gap analysis contained in that report.
- (6) For the purpose of that conversion, national certificates attesting compliance with the applicable national military requirements should be considered equivalent to national military air traffic controller licences.
- (7) Previously acquired experience under the military air traffic control provision should be taken into account when establishing the unit endorsement course for the applicant in accordance with point ATCO.D.055 (b)(7) of Annex I.

¹ OJ L 212, 22.08.2018, p. 1.

² Commission Regulation (EU) 2015/340 of 20 February 2015 laying down technical requirements and administrative procedures relating to air traffic controllers' licences and certificates pursuant to Regulation (EC) No 216/2008 of the European Parliament and of the Council, amending Commission Implementing Regulation (EU) No 923/2012 and repealing Commission Regulation (EU) No 805/2011 (OJ L 63, 6.3.2015, p. 1).

- (8) National competent authorities and the military authorities of the Member States should cooperate towards ensuring the efficient implementation of the conversion of national military air traffic controller licences into student air traffic controller licences.
- (9) The requirements applicable to authorities set out in Regulation (EU) 2015/340 should be updated in light of technical progress. In addition, consistency should be ensured between the requirements set out in Regulation (EU) 2015/340 and the requirements set out in Commission Implementing Regulation (EU) 2017/373¹ as well as Commission Regulations (EU) No 965/2012², (EU) No 1178/2011³ and (EU) No 139/2014⁴ since in most cases the authority responsible for the oversight of air traffic controllers ('ATCOs') and training organisations is the same body for more than one aviation domain. Thus this Regulation provides for a 'total system approach', which should entail a logical and technologically consistent approach across aviation domains.
- (10) The alignment of Regulation (EU) 2015/340 with Regulation (EU) No 376/2014 of the European Parliament and of the Council as regards the reporting, analysis and follow-up of occurrences in civil aviation⁵ should increase legal certainty and support the implementation of effective occurrence-reporting systems as part of the safety management of organisations.
- (11) The measures provided for in this Regulation are in accordance with the opinion of the Committee established under Article 127(1) of Regulation (EU) 2018/1139,

HAS ADOPTED THIS REGULATION:

¹ Commission Implementing Regulation (EU) 2017/373 of 1 March 2017 laying down common requirements for providers of air traffic management/air navigation services and other air traffic management network functions and their oversight, repealing Regulation (EC) No 482/2008, Implementing Regulations (EU) No 1034/2011, (EU) No 1035/2011 and (EU) 2016/1377 and amending Regulation (EU) No 677/2011 (OJ L 62, 8.3.2017, p. 1).

PRIVILEGES OF AERODROME CONTROL VISUAL (ADV) RATING HOLDERS

Air traffic controllers who have obtained the aerodrome control visual (ADV) rating at an aerodrome that publishes instrument approach and departure procedures, or air traffic controllers who move to an aerodrome with published instrument approach and departure procedures, should undergo a specific rating training at a certified initial training organisation to acquire competence equivalent to the aerodrome control (ADC) rating. The specific rating training should address the differences between ADV and ADC. For those air traffic controllers, the licence will contain the ADC rating following the successful completion of the specific rating training.

ED Decision 2019/004/R

GENERAL

When aerodrome control service is provided from a 'remote tower' (defined in EASA 'Guidance Material on remote aerodrome air traffic services' — Issue 2¹), each aerodrome for which the service is provided should constitute its own unit endorsement.

GM1 TO AMC1 ATCO.B.020(A) UNIT ENDORSEMENTS

ED Decision 2019/004/R

There might be cases where, for a given aerodrome, air traffic control service is provided from a 'conventional tower' (defined in EASA 'Guidance Material on remote aerodrome air traffic services' — Issue 2) during certain time periods and from a 'remote tower' (defined in the EASA 'Guidance Material on remote aerodrome air traffic services' — Issue 2) at other times. In such cases, the unit endorsement(s) should indicate the working position(s) (conventional and/or remote tower) from which the licence holder is authorised to provide the service.

NOTE: This does not refer to contingency arrangements/contingency facilities, as the related training and use are deemed to be covered by any unit endorsement. When this is done on a temporary basis for shorter/limited time periods, e.g. during a validation or for transitional purposes, different unit endorsements for conventional and remote tower may not be considered necessary.

PROCESSES FOR ASSESSING COMPETENCE AND EXAMINING THEORETICAL KNOWLEGDE AND UNDERSTANDING

- (a) The practical performance and skills should be assessed in live traffic situations.
- (b) Theoretical competence should be examined to ascertain the knowledge and understanding of air traffic controllers.
- (c) Subjects taught during refresher training such as standard practices and procedures, abnormal and emergency situations and human factors should be assessed on STD or in other simulated environments and/or examined.

GM1 ATCO.B.025(a)(5) Unit competence scheme

ED Decision 2015/010/R

ASSESSMENTS

- (a) Assessments may have one or more components.
- (b) One component should be the assessment of practical skills; other components may be oral and/or written examinations.
- (c) Practical skills assessments should be conducted as continuous assessment or dedicated practical assessment(s).
- (d) Continuous assessment
 - Continuous assessment should be achieved by the assessor assessing, during normal operational duties, the operational performance compared to the standard of the air traffic control service expected.
 - Where the assessor has not been able to adequately assess the air traffic controller by continuous assessment, he/she should not certify the air traffic controller's competence until a dedicated practical assessment has been conducted.
- (e) Dedicated practical assessment
 - A dedicated practical assessment may consist of a single assessment or a series of assessments.

To conduct a dedicated practical assessment, the assessor(s) should sit with the air traffic controller with the purpose of assessing, under normal operational conditions, the operational performance compared to the standard of the air traffic control service expected.

The air traffic controller concerned should be advised that a dedicated practical assessment is to be conducted and be briefed on the conduct of the assessment.

For those situations where an applicant's performance cannot be observed at the time of the assessment (e.g. low visibility operations, snow clearing, military activity, etc.), the assessment may be supplemented by synthetic training device sessions and/or an oral examination.

ANNEX I – PART ATCO – REQUIREMENTS FOR THE LICENSING OF AIR TRAFFIC CONTROLLERS

SUBPART B – LICENCES, RATINGS AND ENDORSEMENTS

- (f) The performance objectives' topics to be assessed should be determined in detail by the air navigation service provider. Examples of performance objectives' topics are as follows:
 - application of unit regulations and procedures (e.g. minimum separation standards, letters of agreement, Aeronautical Information Publications);
 - traffic analysis and planning;
 - task priority setting;
 - communication, including phraseology;
 - capacity and expedition;
 - accuracy;
 - initiative, adaptability and decision-making;
 - air traffic control techniques;
 - teamwork and other human factors skills;
 - the level of risk associated with the tasks performed (e.g. attitudes to risk).
- (g) Procedures when failing

Notwithstanding <u>ATCO.B.025(a)(10)</u>, when an air traffic controller fails in one or more of the components of the assessment, he/she should not be allowed to exercise the privilege of this unit endorsement, and provisional inability in accordance with <u>ATCO.A.015(b)</u> may be declared until a successful competence assessment has been performed. Resitting the full competence assessment or the failed part only may be required.

(h) Record keeping

The results of all assessments, including those of the continuous assessment, and examinations should be documented and stored confidentially, accessible to the assessor and the person being assessed.

 - (2) the subjects, topics and subtopics being examined or assessed.

GM1 ATCO.B.025(a)(6) Unit competence scheme

ED Decision 2015/010/R

ORAL EXAMINATIONS

Oral examinations should be used to test understanding of applicable techniques and the rules governing them, particularly of unit and national air traffic control procedures. Scenario-type questioning allows the assessor to gather additional evidence of how an air traffic controller would react in circumstances that are not observable but are nevertheless considered important to the overall operation at that ATC unit.

The oral examination should give a clear indication that the air traffic controller knows not only what he/she should be doing, but why he/she should be doing it. The oral examination requires considerable skills and it should be undertaken in a way to ensure consistency among individual assessors.

ATCO.B.030 Language proficiency endorsement

Regulation (EU) 2015/340

- (a) Air traffic controllers and student air traffic controllers shall not exercise the privileges of their licences unless they have a valid language proficiency endorsement in English and, if applicable, in the language(s) imposed by the Member State for reasons of safety at the ATC unit as published in the Aeronautical Information Publications. The language proficiency endorsement shall indicate the language(s), the level(s) of proficiency and the expiry date(s).

- (5) use a dialect or accent which is intelligible to the aeronautical community.
- (d) Notwithstanding point (c), extended level (level five) of the language proficiency rating scale set out in <u>Appendix 1 of Annex I</u> may be required by the air navigation service provider, where the operational circumstances of the particular rating or endorsement warrant a higher level of language proficiency for imperative reasons of safety. Such a requirement shall be nondiscriminatory, proportionate, transparent, and objectively justified by the air navigation service provider wishing to apply the higher level of proficiency and shall be approved by the competent authority.
- (e) Language proficiency shall be demonstrated by a certificate attesting the result of the assessment.

ATCO.B.035 Validity of language proficiency endorsement

 - (ii) unlimited, for any other language(s) referred to in ATCO.B.030(a).
- (b) The validity period of the language proficiency endorsements for initial issue and renewal shall start not later than 30 days from the date on which the language proficiency assessment has been successfully completed.

AMC1 ATCO.B.045 Language training

ED Decision 2015/010/R

- (a) Language training should contain communication in a job-related context particularly to handle abnormal and emergency situations and conduct non-routine coordination with colleagues, crews and technical staff.
- (b) Emphasis should be placed on listening comprehension, speaking interaction and vocabulary building.

GM1 ATCO.B.045 Language training

ED Decision 2015/010/R

While it is true that many licence holders regularly have prolonged and extensive opportunities to practise — and so to maintain — their language proficiency, it is also true that a purely routine use of the language through phraseology, standard procedures and limited social contact only maintains a restricted core usage of the language which might be quite inadequate for managing unexpected and abnormal situations.

Research shows that language proficiency erosion (language attrition) occurs rapidly over time; the lower the initial level, the faster the rate of erosion unless systematic strategies and a high degree of motivation counter this trend.

It is very well documented that one's language and communicative proficiency, even in one's native language, deteriorates sharply under stress, therefore, it is recommended that licence holders participate in available language training.

GM3 ATCO.D.060(c) Unit endorsement course

ED Decision 2019/004/R

TRAINING FOR AIR TRAFFIC CONTROLLERS PROVIDING REMOTE AERODROME AIR TRAFFIC SERVICES

The unit endorsement course should enable air traffic controllers providing aerodrome control service from a 'remote tower' (defined in the EASA 'Guidance Material on remote aerodrome air traffic services' — Issue 2) to acquire knowledge of the concept of remote aerodrome air traffic services and of the characteristics of the operating environment, to appreciate the necessity to consider the specific human factors influence on the remote aerodrome air traffic services, as well as to recognise specific abnormal situations and to manage their impact.

This could be achieved by addressing the following items:

- Introduction to remote aerodrome air traffic services
 - Concept of remote aerodrome air traffic services (described in Chapters 3 and 4 of the EASA 'Guidance Material on remote aerodrome air traffic services' — Issue 2);
 - 'Remote tower modules' (RTMs) (defined in the EASA 'Guidance Material on remote aerodrome air traffic services'— Issue 2);
 - 'Remote tower centre' (RTC) (defined in the EASA 'Guidance Material on remote aerodrome air traffic services' — Issue 2);
 - Technical enablers used for remote aerodrome air traffic services (described in Section 3.5 and Chapter 5 of the EASA 'Guidance Material on remote aerodrome air traffic services' — Issue 2); and
 - Operational applications (described in Chapters 3 and 4 of the EASA 'Guidance Material on remote aerodrome air traffic services' — Issue 2).

Operating environment

- Configuration of the RTM and RTC (if applicable) and modes of operation
- 'Visual presentation' (defined and described in Chapter 2 and Section 5.2 of the EASA 'Guidance Material on remote aerodrome air traffic services' — Issue 2) at the RTM, for example:

ANNEX I – PART ATCO – REQUIREMENTS FOR THE LICENSING OF AIR TRAFFIC CONTROLLERS

SUBPART D – AIR TRAFFIC CONTROLLER
TRAINING

- layout and orientation;
- technical capabilities and limitations of a 'visual surveillance system' (defined in the EASA 'Guidance Material on remote aerodrome air traffic services' — Issue 2), including among others:
 - impact of weather conditions on site the aerodrome;
 - end-to-end delay;
 - frame rate,
 - any differences in light conditions between the aerodrome and the visual presentation;
 - 'dead' pixels;
 - any overlaid information and any site-specific equipment/functions such as sun filters; and
 - seasonal settings.
- Set-up and characteristics of the local equipment at the aerodrome, e.g. location of cameras, signalling lamp, etc.
- Familiarisation with the physical aerodrome(s) environment and the different local stakeholders via study visit(s)
- Local weather characteristics
- Human factors aspects
 - Human factors influence on remote aerodrome air traffic services

Factors that can generate fatigue in a 'remote tower' environment (defined in the EASA 'Guidance Material on remote aerodrome air traffic services' — Issue 2), for example:

- eye strain caused by the performance of the visual presentation or by contrast in lighting against the background;
- artificial light and/or lack of daylight in the RTM); and
- preventing and mitigating strategies on fatigue.
- Procedures for degraded modes, for example:
 - Complete or partial loss of the visual presentation
 - Corrupt, delayed or frozen image
 - Loss or degradation of the 'binocular functionality' (described in Section 5.2 of the EASA 'Guidance Material on remote aerodrome air traffic services' Issue 2).

MULTIPLE MODE OF OPERATION

When performing 'multiple mode of operation' (defined and described in the EASA 'Guidance Material on remote aerodrome air traffic services' — Issue 2), in addition to <u>GM3 ATCO.D.060(c)</u>, the following items should also be considered:

- Use of communication facilities (e.g. aeronautical mobile service, aeronautical fixed service and surface movement control service) for simultaneous provision of air traffic services in geographically separated areas of responsibility
- Applicable procedures for traffic management, such as traffic prioritisation, enabling multiple mode of operation
- Procedures for prioritising between aerodromes
- Procedures for the transferring/merging/splitting of aerodromes in an RTM (defined in the EASA 'Guidance Material on remote aerodrome air traffic services' Issue 2)
- Different weather and light conditions at different aerodromes
- Human capabilities/limitations with regard to the simultaneous handling of more than one aerodrome and distribution of attention

ATCO.D.065 Demonstration of theoretical knowledge and understanding

Regulation (EU) 2015/340

Theoretical knowledge and understanding shall be demonstrated by examinations.

GM1 ATCO.D.065 Demonstration of theoretical knowledge and understanding

ED Decision 2015/010/R

METHODS OF EXAMINATION

- (a) Oral examinations and/or written/computer-based examinations should be used to demonstrate the controller's knowledge and understanding.
 - (1) Oral examinations

The oral examination is used to test the understanding of applicable techniques and the rules governing them, particularly of unit and national air traffic control procedures. Scenario-type questioning allows examiners to gather additional evidence of how an

ANNEX I – PART ATCO – REQUIREMENTS FOR THE LICENSING OF AIR TRAFFIC CONTROLLERS

SUBPART D – AIR TRAFFIC CONTROLLER
TRAINING

applicant would react in circumstances that are not observable, but are nevertheless considered important to the overall operation at that ATC unit.

Oral examinations will give a clear indication that the persons undertaking training know not only what they should be doing, but why they should be doing it. The oral examination requires considerable skills and it should be undertaken in a way to ensure consistency among individual examiners.

(2) Written examinations

The written examination is used to test theoretical knowledge and to a lesser degree the understanding of applicable techniques and the rules governing them, particularly of unit and national air traffic control procedures. It is easier to administer and to ensure the consistency of written examinations particularly when using multiple-choice questioning. Although multiple-choice questioning can test knowledge, it is not appropriate for determining what a controller would do in a particular operational situation.

Written examinations can also be computer-based.

(b) The most comprehensive method of testing the understanding of the person undertaking training, contrary to their possession of pure knowledge, would be a combination of written examinations that assess the knowledge of unit and national procedures, together with a separate oral examination which tests the understanding and reactions to operational situations.

ATCO.D.070 Assessments during unit endorsement courses

Regulation (EU) 2015/340

- (a) The applicant's assessment shall be conducted in the operational environment under normal operational conditions at least once at the end of the on-the-job training.
- (b) When the unit endorsement course contains a pre-on-the-job training phase, the applicant's skills shall be assessed on a synthetic training device at least at the end of this phase.
- (c) Notwithstanding point (a), a synthetic training device may be used during a unit endorsement assessment to demonstrate the application of trained procedures not encountered in the operational environment during the assessment.

GM1 ATCO.D.070 Assessments during unit endorsement courses

ED Decision 2015/010/R

(a) DEDICATED ASSESSMENTS

- (1) A dedicated assessment should be carried out for the issue or renewal of a unit endorsement.
- (2) A dedicated assessment may consist of a single assessment or a series of assessments, as detailed in the unit training plan.
- (3) To conduct a dedicated assessment, the assessor(s) should sit with the applicant with the purpose of observing the quality and assessing the standard of work being carried out and, if also acting as OJTI at the same time, to maintain a safe, orderly and expeditious flow of air traffic.

ANNEX I – PART ATCO – REQUIREMENTS FOR THE LICENSING OF AIR TRAFFIC CONTROLLERS

SUBPART D – AIR TRAFFIC CONTROLLER TRAINING

- (4) The applicant concerned should be briefed on the conduct of the assessment.
- (5) For those situations where an applicant's performance cannot be observed at the time of the assessment (e.g. low visibility operations, snow clearing, military activity, etc.), the assessment may be supplemented by synthetic training device sessions and oral examination.
- (6) Dedicated assessments may also be conducted at any stage of training as detailed in the unit training plan, where a more definitive measure of the progress is required, for example after 50 hours of practical training.

(b) CONTINUOUS ASSESSMENT

- (1) Continuous assessment may be performed by the assessor observing the standard of the air traffic control service provided by those whose competence he/she will certify as he/she works with them during unit training or normal operational duties.
- (2) In cases where the assessors have not had sufficient contact with the applicant to adequately assess his/her performance, they will not certify the applicant's competence until they have conducted a dedicated practical assessment. The applicant concerned must be advised that a dedicated practical assessment is to be conducted.

(c) ORAL EXAMINATION

- (1) The oral examination is used to test the understanding of applicable techniques and the rules governing them, particularly of unit and national air traffic control procedures. Scenario-type questioning allows the examiners to gather additional evidence of how an applicant would react in circumstances that are not observable, but are nevertheless considered important to the overall operation at that ATC unit.
- (2) The oral examination will give a clear indication that the applicant knows not only what he/she should be doing, but why he/she should be doing it. It requires considerable skills and it should be undertaken in a way to ensure consistency among individual examiners.

EFFECTIVE COMMUNICATION

Communication misunderstanding is present in many air traffic occurrences and the consistent use of approved phraseology is designed to mitigate such occurrences.

For the purpose of refresher training, emphasis is, therefore, put on effective communication, including the use of approved phraseology, both for the use of standard practices and procedures and for abnormal and emergency situations training.

Effective communication should make use of a variety of communication modes, including the use of appropriate phraseology and radio communication.

ANNEX I – PART ATCO – REQUIREMENTS FOR THE LICENSING OF AIR TRAFFIC CONTROLLERS

SUBPART D – AIR TRAFFIC CONTROLLER
TRAINING

AMC1 ATCO.D.095(a)(1) Training of assessors

ED Decision 2015/010/R

ASSESSOR TRAINING COURSE

A successful assessment for the purpose of the assessor training course should establish competence at least in the following areas of assessment knowledge and techniques:

- (a) regulatory environment and legal obligations;
- (b) types of assessment and their application;
- (c) performance objectives constituting air traffic controller competence;
- (d) conditions of assessments to create reliable results;
- (e) processing of assessments and administrative procedures;
- (f) giving verbal feedback and writing assessment reports;
- (g) vested interests and code of conduct;
- (h) accurately assessing competence against the performance objectives;
- (i) developing a good questioning technique and designing questions appropriate to the assessment.

AMC2 ATCO.D.095(a)(1) Training of assessors

ED Decision 2015/010/R

ASSESSMENT OF ASSESSOR COMPETENCE

The assessment of assessor competence should focus on the application of the skills of an assessor. The skills should represent at least a subset of the competences taught during the assessor training course.

AMC1 ATCO.D.095(a)(2) Training of assessors

ED Decision 2015/010/R

REFRESHER TRAINING IN ASSESSMENT SKILLS

Refresher training in assessment skills should prevent knowledge and skills erosion and it should be designed to maintain skills in assessment techniques and awareness of the regulatory environment.

GM1 ATCO.D.095(a)(3) Training of assessors

ED Decision 2015/010/R

ASSESSMENT OF ASSESSOR COMPETENCE

The level of harmonisation on competence assessment is low as a result of the variety of methods. Any assessment of assessor competence should be realistic and it could take place during live traffic situations or during training.

LANGUAGE PROFICIENCY RATING SCALE – REQUIREMENTS FOR PROFICIENCY IN LANGUAGES

Language proficiency rating scale: expert, extended and operational levels						
Level	Pronunciation Uses a dialect and/or accent intelligible to the aeronautical community	Structure Relevant grammatical structures and sentence patterns are determined by language functions appropriate to the task	Vocabulary	Fluency	Comprehension	Interactions
Expert 6	Pronunciation, stress, rhythm and intonation, though possibly influenced by the first language or regional variation, almost never interfere with ease of understanding.	Both basic and complex grammatical structures and sentence patterns are consistently well controlled.	Vocabulary range and accuracy are sufficient to communicate effectively on a wide variety of familiar and unfamiliar topics. Vocabulary is idiomatic, nuanced, and sensitive to register.	Able to speak at length with a natural, effortless flow. Varies speech flow for stylistic effect, e.g. to emphasise a point. Uses appropriate discourse markers and connectors spontaneously	Comprehension is consistently accurate in nearly all contexts and includes comprehension of linguistic and cultural subtleties.	Interacts with ease in nearly all situations. Is sensitive to verbal and non-verbal cues, and responds to them appropriately.
Extended 5	Pronunciation, stress, rhythm and intonation, though influenced by the first language or regional variation, rarely interfere with ease of understanding.	Basic grammatical structures and sentence patterns are consistently well controlled. Complex structures are attempted but with errors which sometimes interfere with meaning.	Vocabulary range and accuracy are sufficient to communicate effectively on common, concrete, and work-related topics. Paraphrases consistently and successfully.	Able to speak at length with relative ease on familiar topics, but may not vary speech flow as a stylistic device. Can make use of appropriate discourse	Comprehension is accurate on common, concrete, and work-related topics and mostly accurate when the speaker is confronted with a linguistic or situational complication or an unexpected turn of	Responses are immediate, appropriate, and informative. Manages the speaker/listener relationship effectively.

Operational 4	Pronunciation, stress, rhythm and intonation are influenced by the first language or regional variation but only sometimes interfere with ease of understanding.	Basic grammatical structures and sentence patterns are used creatively and are usually well controlled. Errors may occur, particularly in unusual or unexpected circumstances, but rarely interfere with meaning.	Vocabulary range and accuracy are usually sufficient to communicate effectively on common, concrete, and work-related topics. Can often paraphrase successfully when lacking vocabulary in unusual or unexpected circumstances.	Produces stretches of language at an appropriate tempo. There may be occasional loss of fluency on transition from rehearsed or formulaic speech to spontaneous interaction, but this does not prevent effective communication. Can make limited use of discourse markers or connectors. Fillers are not distracting.	Comprehension is mostly accurate on common, concrete, and work-related topics when the accent or variety used is sufficiently intelligible for an international community of users. When the speaker is confronted with a linguistic or situational complication or an unexpected turn of events, comprehension may be slower or require clarification strategies.	Responses are usually immediate, appropriate, and informative. Initiates and maintains exchanges even when dealing with an unexpected turn of events. Deals adequately with apparent misunderstandings by checking, confirming, or clarifying.

Level	Pronunciation Uses a dialect and/or accent intelligible to the aeronautical community	Structure Relevant grammatical structures and sentence patterns are determined by language functions appropriate to the task	Vocabulary	Fluency	Comprehension	Interactions
Pre-operational 3	Pronunciation, stress, rhythm and intonation are influenced by the first language or regional variation and frequently interfere with ease of understanding.	Basic grammatical structures and sentence patterns associated with predictable situations are not always well controlled. Errors frequently interfere with meaning.	Vocabulary range and accuracy are often sufficient to communicate on common, concrete, or work-related topics but range is limited and the word choice often inappropriate. Is often unable to paraphrase successfully when lacking vocabulary.	Produces stretches of language, but phrasing and pausing are often inappropriate. Hesitations or slowness in language processing may prevent effective communication. Fillers are sometimes distracting.	Comprehension is often accurate on common, concrete, and work-related topics when the accent or variety used is sufficiently intelligible for an international community of users. May fail to understand a linguistic or situational complication or an unexpected turn of events.	Responses are sometimes immediate, appropriate, and informative. Can initiate and maintain exchanges with reasonable ease on familiar topics and in predictable situations. Generally inadequate when dealing with an unexpected turn of events.
Elementary 2	Pronunciation, stress, rhythm and intonation are heavily influenced by the first language or regional variation and usually interfere with ease of understanding.	Shows only limited control of a few simple memorised grammatical structures and sentence patterns.	Limited vocabulary range consisting only of isolated words and memorised phrases.	Can produce very short, isolated, memorised utterances with frequent pausing and a distracting use of fillers to search for expressions and to articulate less familiar words.	Comprehension is limited to isolated, memorised phrases when they are carefully and slowly articulated.	Response time is slow and often inappropriate. Interaction is limited to simple routine exchanges.

SUBPART A - GENERAL REQUIREMENTS

GM1 ATCO.AR.A.025A Immediate reaction to an information security incident or vulnerability with an impact on aviation safety

FD Decision 2023/010/F

When deemed necessary, a two-step mechanism could be used: a report alerting about the information security event or incident and the availability of additional data that would require controlled and confidential distribution. This report should only alert recipients of the urgency and the necessity for organisations and competent authorities to establish further communication through secure means.

Therefore, the report should consist of two parts: one limited to mostly public information and one containing the sensitive data that should be restricted to the recipients who need to know. Wherever possible, reports should be based on an agreed taxonomy.

ATCO.AR.D.001 Procedure for the issue, revalidation and renewal of licences, ratings, endorsements and authorisations

Reaulation (EU) 2015/340

- (a) The competent authority shall establish procedures for the application, issue and exchange of licences, issue of ratings and endorsements, as well as the revalidation and renewal of endorsements. These procedures may include:
 - (1) the issue of temporary OJTI authorisation and temporary assessor authorisation; and
 - (2) if applicable, the authorisation for assessors to revalidate and renew unit endorsements in which case assessors shall submit all records, reports and any other information to the competent authority as defined in such procedures.
- (b) Upon receiving an application and, if relevant, any supporting documentation, the competent authority shall verify the application completeness and whether the applicant meets the requirements set out in Annex I.
- (c) If the applicant meets the applicable requirements, the competent authority shall issue, revalidate or renew, when appropriate, the relevant licence, rating(s) and endorsement(s) using the format for licences established in Appendix 1 of Annex II. The temporary OJTI authorisation referred to in ATCO.C.025 and the temporary assessor authorisation referred to in ATCO.C.025 shall be issued as a separate document wherein the privileges of the holder as well as the validity of the authorisation shall be specified.
- (d) For the purpose of reducing unnecessary administrative burden, the competent authority may establish procedures for establishing a unique date of validity for several endorsements. In any case, the validity periods of the endorsements concerned shall not be extended.
- (e) The competent authority shall replace the air traffic controller licence if necessary for administrative reasons and when point (XIIa) of the licence is completed and no further space remains. The date of the first issue of the ratings and rating endorsements shall be transferred to the new licence.

- (b) Training organisations should specify the basic structure of the compliance monitoring function applicable to the activities conducted.
- (c) The compliance monitoring function should be structured according to the activities of the training organisation to be monitored.

GM1 ATCO.OR.C.001(f) Management system of training organisations

ED Decision 2015/010/R

EXAMPLE OF COMPLIANCE MONITORING SYSTEM

- (a) Training organisations may monitor compliance with the procedures they have designed to ensure safe activities. In doing so, they may, as a minimum, and, where appropriate, monitor:
 - (1) the organisational structure;
 - (2) the plans and objectives;
 - (3) the privileges of the organisation;
 - (4) the manuals, logs and records;
 - (5) the training standards;
 - (6) the management system.
- (b) Organisational set-up
 - (1) To ensure that the training organisation continues to meet the requirements of this Regulation, the accountable manager may designate a person responsible for the compliance monitoring function whose role is to verify, by monitoring the activities of the organisation, that the standards required by this Regulation and any additional requirements as established by the organisation are met under the supervision of the relevant head of the functional area. For small training organisations, these identified functions can be fulfilled by the same person.
 - (2) The person designated for the compliance monitoring function should be responsible for ensuring that the compliance monitoring programme is properly implemented, maintained and continually reviewed and improved.

ANNEX III – PART ATCO.OR – REQUIREMENTS FOR AIR TRAFFIC CONTROLLER TRAINING ORGANISATIONS AND AERO-MEDICAL CENTRES

SUBPART C – MANAGEMENT OF AIR TRAFFIC CONTROLLER TRAINING ORGANISATIONS

- (3) The designated person responsible for the compliance monitoring function should:
 - (i) have direct access to the accountable manager; and
 - (ii) have access to all parts of the training organisation and, as necessary, to any contracted organisation.
- (c) Compliance monitoring documentation
 - (1) Relevant documentation could include the relevant part(s) of the training organisation management system documentation.
 - (2) In addition, relevant documentation could also include the following:
 - (i) terminology;
 - (ii) specified activity standards;
 - (iii) description of the organisation;
 - (iv) allocation of duties and responsibilities;
 - (v) procedures to ensure regulatory compliance;
 - (vi) compliance monitoring programme, reflecting:
 - (A) schedule of the monitoring programme;
 - (B) audit procedures;
 - (C) reporting procedures;
 - (D) follow-up and corrective action procedures; and
 - (E) recording system;
 - (vii) training elements referred to in paragraph 4(b)
 - (viii) document control.

(d) Training

- (1) Correct and thorough training is essential to optimise compliance in every training organisation. In order to achieve significant outcomes of such training, the training organisation needs to ensure that all personnel understand the objectives laid down in the organisation's manual.
- (2) Those responsible for managing the compliance monitoring function should receive training in this task. Such training could cover the requirements of compliance monitoring, manuals and procedures related to the task, audit techniques, reporting and recording.
- (3) Time needs to be provided to train all personnel involved in compliance management and for briefing the rest of the personnel.
- (4) The allocation of time and resources needs to be governed by the activities covered by the training organisation.

SUBPART C – MANAGEMENT OF AIR TRAFFIC CONTROLLER TRAINING ORGANISATIONS

AMC2 ATCO.OR.C.001(f) Management system of training organisations

ED Decision 2015/010/R

COMPLIANCE MONITORING

The person designated for the compliance monitoring function should be responsible for the review and continuous improvement of the established management system's policies, processes and procedures. The following tools are essential to the ongoing continuous improvement process:

- (a) organisational risk profile;
- (b) risk management plan;
- (c) coherence matrix;
- (d) corrective and preventive action reports; and
- (e) inspection and audit reports.

GM2 ATCO.OR.C.001(f) Management system of training organisations

ED Decision 2015/010/R

COMPLIANCE MONITORING

- (a) These tools and processes related to the compliance monitoring function are interrelated and help define the continuous improvement efforts of the organisation. For example, any corrective or preventive action report could identify a deficiency or an opportunity for improvement. The person responsible for the compliance monitoring function would then be required to ensure the identified issue was addressed and the corrective or preventive action effectively implemented. The same would be true if the discovery of an issue was identified during an inspection or audit.
- (b) The effective implementation of change and the subsequent validation that the change did result in the desired outcome is critical to the continuous improvement process. Simply introducing a well-meaning suggestion for improvement into the organisation without carefully managing that change could have undesirable consequences. It is, therefore, the responsibility of the person in charge of the compliance monitoring function to introduce, monitor and validate improvement efforts.
- (c) A simple but effective process to use in managing continuous improvement is known as the plan-do-check-act, or PDCA, approach:
 - (1) plan map out the implementation of the recommended change, identifying at least:
 - (i) those people who will be affected by the change;
 - (ii) the required measures necessary to mitigate risk; and
 - (iii) the desired outcome and its intended consequences.

ANNEX III – PART ATCO.OR – REQUIREMENTS FOR AIR TRAFFIC CONTROLLER TRAINING ORGANISATIONS AND AERO-MEDICAL CENTRES

SUBPART C – MANAGEMENT OF AIR TRAFFIC CONTROLLER TRAINING ORGANISATIONS

- (2) do execute the implementation plan once all affected groups have accepted the proposal and understand their role in ensuring its success;
- (3) check apply sufficient quality control 'stage' checks throughout the implementation phase to ensure any unintended deviations in the execution are identified and addressed without delay; and
- (4) act analyse the results and take appropriate action as necessary.

AMC1 ATCO.OR.C.015(b) Facilities and equipment

ED Decision 2015/010/R

SPECIFICATIONS FOR SYNTHETIC TRAINING DEVICES

(a) Synthetic training devices classifications

Synthetic training devices used for training should be classified according to one of the following classifications:

- (1) simulator (SIM);
- (2) part-task trainer (PTT).
- (b) Synthetic training device (STD) criteria

If an STD is used for training, it should be approved by the competent authority as part of the course approval process for any training plan. Training organisations should demonstrate how the STD will provide adequate support for the intended training, in particular, how the STD will meet the stated objectives of the practical training exercises and enable the performance objectives to be assessed to the level determined in the training programme.

This demonstration and the related documentation should include the following relevant criteria:

- (1) the general environment, which should provide an environment in which STD exercises may be run without undue interference from unrelated activities;
- (2) the STD layout;
- (3) the equipment provided;
- (4) the display presentation, functionality, and updating of operational information;

ANNEX III – PART ATCO.OR – REQUIREMENTS FOR AIR TRAFFIC CONTROLLER TRAINING ORGANISATIONS AND AERO-MEDICAL CENTRES

SUBPART C – MANAGEMENT OF AIR TRAFFIC CONTROLLER TRAINING ORGANISATIONS

- (5) data displays, including strip displays, where appropriate;
- (6) coordination facilities;
- (7) aircraft performance characteristics, including the availability of manoeuvres, e.g. holding or instrumental landing system (ILS) operation, required for a particular simulation;
- (8) the availability of real-time changes during an exercise;
- (9) the processes by which the training organisation can be assured that staff associated with the training conducted with the use of an STD are competent;
- (10) the degree of realism of any voice recognition system associated with the STD; and
- (11) where a simulator is an integral part of an operational ATC system, the processes by which the training organisation is assured that interference between the simulated and operational environments is prevented.
 - The extent to which the STD achieves the above criteria will be used to determine the adequacy of the STD for the proposed use. As a general principle, the greater the degree of replication of the operational position being represented, the greater the use will be possible for any particular training.
- (c) STD used for pre-on-the-job training

When an STD is used for pre-on-the-job training and the training time is counted as operational training, the STD classification should be a full-size replica of a working position, including all equipment, and computer programmes necessary to represent the full tasks associated with that position, including realistic wind at all levels to facilitate SRA. In the case of a working position at a tower unit, it includes an out-of-the-tower view.

Regulation (EU) 2015/340

- (a) Training organisations shall retain detailed records of persons undertaking or having undertaken training to show that all requirements of the training courses have been met.

- (c) The records required in points (a) and (b) shall be retained for a minimum period of five years subject to the applicable national data protection law:
 - (1) after the person undertaking training has completed the course; and

ED Decision 2015/010/R

MEDICATION — GUIDANCE FOR AIR TRAFFIC CONTROLLERS

- (a) Any medication can cause side effects, some of which may impair the safe exercise of the privileges of the licence. Equally, symptoms of colds, sore throats, diarrhoea and other abdominal upsets may cause little or no problem whilst not exercising the privileges of the licence, but may distract the air traffic controller and degrade their performance whilst on duty. Therefore, one issue with medication and the safe exercise of the privileges of the licence is the underlying condition and, in addition, the symptoms may be compounded by the side effects of the medication prescribed or bought over the counter for treatment. This guidance material provides some help to air traffic controllers in deciding whether expert aero-medical advice by an AME, AeMC or Medical Assessor is needed.
- (b) Before taking any medication and exercising the privileges of the licence, the following three basic questions should be satisfactorily answered:
 - (1) Do I feel fit to control?
 - (2) Do I really need to take medication at all?
 - (3) Have I given this particular medication a personal trial whilst not exercising the privileges of my licence to ensure that it will not have any adverse effects on my ability to exercise the privileges of my licence?
- (c) Confirming the absence of adverse effects may well need expert aero-medical advice.
- (d) The following are some widely used medicines with a description of their compatibility with the safe exercise of the privileges of the licence:
 - (1) Antibiotics. Antibiotics may have short-term or delayed side effects which can affect the performance of the air traffic controller. More significantly, however, their use usually indicates that an infection is present and, thus, the effects of this infection may mean that an air traffic controller is not fit to control and should obtain expert aero-medical advice.
 - (2) Anti-malaria drugs. The decision on the need for anti-malaria drugs depends on the geographical areas to be visited, and the risk that the air traffic controller has of being exposed to mosquitoes and of developing malaria. An expert medical opinion should be obtained to establish whether anti-malaria drugs are needed and what kind of drugs should be used. Most of the anti-malaria drugs (atovaquone plus proguanil, chloroquine, doxycycline) are compatible with the safe exercise of the privileges of the licence. However, adverse effects associated with mefloquine include insomnia, strange dreams, mood changes, nausea, diarrhoea and headaches. In addition, mefloquine may cause spatial disorientation and lack of fine coordination and is, therefore, not compatible with the safe exercise of the privileges of the licence.
 - (3) Antihistamines. Antihistamines can cause drowsiness. They are widely used in 'cold cures' and in treatment of hay fever, asthma and allergic rashes. They may be in tablet form or a constituent of nose drops or sprays. In many cases, the condition itself may preclude the safe exercise of the privileges of the licence, so that, if treatment is necessary, expert aero-medical advice should be sought so that so-called non-sedative antihistamines, which do not degrade human performance, can be prescribed.

ANNEX IV – PART ATCO.MED – MEDICAL REQUIREMENTS FOR AIR TRAFFIC CONTROLLERS

SUBPART A - GENERAL REQUIREMENTS

- (4) Cough medicines. Antitussives often contain codeine, dextromethorfan or pseudoephedrine which are not compatible with the safe exercise of the privileges of the licence. However, mucolytic agents (e.g. carbocysteine) are well tolerated and are compatible with the safe exercise of the privileges of the licence.
- (5) Decongestants. Nasal decongestants with no effect on alertness may be compatible with the safe exercise of the privileges of the licence.
- (6) Nasal corticosteroids are commonly used to treat hay fever, and are compatible with the safe exercise of the privileges of the licence.

(7)

- (i) Common pain killers and antifebrile drugs. Non-Steroidal Anti-Inflammatory Drugs (NSAIDs) and paracetamol, commonly used to treat pain, fever or headaches, may be compatible with the safe exercise of the privileges of the licence. However, the air traffic controller should give affirmative answers to the three basic questions in paragraph (b) before using the medication and exercising the privileges of the licence.
- (ii) Strong analgesics. The more potent analgesics including codeine are opiate derivatives, and may produce a significant decrement in human performance and, therefore, are not compatible with the safe exercise of the privileges of the licence.
- (8) Anti-ulcer medicines. Gastric secretion inhibitors such as H2 antagonists (e.g. ranitidine, cimetidine) or proton pump inhibitors (e.g. omeprazole) may be acceptable after diagnosis of the pathological condition. It is important to seek for the medical diagnosis and not to only treat the dyspeptic symptoms.
- (9) Anti-diarrhoeal drugs. Loperamide is one of the more common anti-diarrhoeal drugs and is usually safe to take whilst exercising the privileges of the licence. However, the diarrhoea itself often makes the air traffic controller unable to exercise the privileges of the licence.
- (10) Hormonal contraceptives and hormone replacement therapy usually have no adverse effects and are compatible with the safe exercise of the privileges of the licence.
- (11) Erectile dysfunction medication. This medication may cause disturbances in colour vision and dizziness. There should be at least six hours between taking sildenafil and exercising the privileges of the licence; and 36 hours between taking vardenafil or tadalafil and exercising the privileges of the licence.
- (12) Smoking cessation. Nicotine replacement therapy may be acceptable. However, other medication affecting the central nervous system (buproprion, varenicline) is not acceptable for air traffic controllers.
- (13) High blood pressure medication. Most anti-hypertensive drugs are compatible with the safe exercise of the privileges of the licence. However, if the level of blood pressure is such that drug therapy is required, the air traffic controller should be monitored for any side effects before exercising the privileges of the licence. Therefore, consultation with the AME, AeMC or Medical Assessor as applicable, is needed.

ANNEX IV – PART ATCO.MED – MEDICAL REQUIREMENTS FOR AIR TRAFFIC CONTROLLERS

SUBPART A - GENERAL REQUIREMENTS

- (14) Asthma medication. Asthma has to be clinically stable before an air traffic controller can return to exercising the privileges of the licence. The use of respiratory aerosols or powders, such as corticosteroids, beta-2-agonists or chromoglycic acid may be compatible with the safe exercise of the privileges of the licence. However, the use of oral steroids or theophylline derivatives is usually incompatible with the safe exercise of the privileges of the licence. Air traffic controllers using medication for asthma should consult an AME, AeMC, or Medical Assessor, as applicable.
- (15) Tranquillisers, anti-depressants and sedatives. The inability to react, due to the use of this group of medicines, together with the underlying condition for which these medications have been prescribed, will almost certainly mean that the mental state of an air traffic controller is not compatible with the safe exercise of the privileges of the licence. Air traffic controllers using tranquillisers, anti-depressants and sedatives should consult an AME, AeMC, or Medical Assessor, as applicable.
- (16) Sleeping tablets. Sleeping tablets dull the senses, may cause confusion and slow reaction times. The duration of effect may vary from individual to individual and may be unduly prolonged. Air traffic controllers using sleeping tablets should consult an AME, AeMC, or Medical Assessor, as applicable.
- (17) Melatonin. Melatonin is a hormone that is involved with the regulation of the circadian rhythm. In some countries it is a prescription medicine, whereas in most other countries it is regarded as a 'dietary supplement' and can be bought without any prescription. The results from the efficiency of melatonin in treatment of jet lag or sleep disorders have been contradictory. Air traffic controllers using melatonin should consult an AME, AeMC, or Medical Assessor, as applicable.
- (18) Coffee and other caffeinated drinks may be acceptable, but excessive coffee drinking may have harmful effects, including disturbance of the heart's rhythm. Other stimulants including caffeine pills, amphetamines, etc. (often known as 'pep' pills) used to maintain wakefulness or suppress appetite can be habit forming. Susceptibility to different stimulants varies from one individual to another, and all may cause dangerous overconfidence. Overdosage causes headaches, dizziness and mental disturbance. These other stimulants should not be used.
- (19) Anaesthetics. Following local, general, dental and other anaesthetics, a period of time should elapse before returning to exercising the privileges of the licence. The period will vary considerably from individual to individual, but an air traffic controller should not exercise the privileges of the licence for at least 12 hours after a local anaesthetic, and for at least 48 hours after a general, spinal or epidural anaesthetic.
- (e) Many preparations on the market nowadays contain a combination of medicines. It is, therefore, essential that if there is any new medication or dosage, however slight, the effect should be observed by the air traffic controller whilst not exercising the privileges of the licence. It should be noted that medication which would not normally affect air traffic controller performance may do so in individuals who are 'oversensitive' to a particular preparation. Individuals are, therefore, advised not to take any medicines before or whilst exercising the privileges of their licence unless they are completely familiar with their effects on their own bodies. In cases of doubt, air traffic controllers should consult an AME, AeMC, or Medical Assessor, as applicable.

ANNEX IV – PART ATCO.MED – MEDICAL REQUIREMENTS FOR AIR TRAFFIC CONTROLLERS

SUBPART A - GENERAL REQUIREMENTS

(f) Other treatments

Alternative or complementary medicine, such as acupuncture, homeopathy, hypnotherapy and several other disciplines, is developing and gaining greater credibility. Such treatments are more acceptable in some States than others. There is a need to ensure that 'other treatments', as well as the underlying condition, are declared and considered by the AME, AeMC, or Medical Assessor, as applicable, for assessing fitness.

ATCO.MED.A.025 Obligations of AeMC and AME

 - (2) make the applicant aware of the consequences of providing incomplete, inaccurate or false statements on their medical history;
 - (3) notify the licensing authority if the applicant provides incomplete, inaccurate or false statements on their medical history;
 - (4) notify the licensing authority if the applicant withdraws the application for a medical certificate at any stage of the process.
- (b) After completion of the aero-medical examinations and assessments, the AeMC and AME shall:
 - (1) advise the applicant whether fit, unfit or referred to the licensing authority;

- (d) AeMCs and AMEs shall submit to the medical assessor of the competent authority, upon request, all aero-medical records and reports, and any other relevant information when required for:
 - medical certification;
 - (2) oversight functions.

ANNEX IV – PART ATCO.MED – MEDICAL REQUIREMENTS FOR AIR TRAFFIC CONTROLLERS

SUBPART A - GENERAL REQUIREMENTS

AMC1 ATCO.MED.A.025 Obligations of AeMC and AME

GM1 ATCO.MED.A.025 Obligations of AeMC and AME

ED Decision 2015/010/R

GUIDELINES FOR THE AEMC AND AME CONDUCTING THE AERO-MEDICAL EXAMINATIONS AND ASSESSMENTS FOR CLASS 3 MEDICAL CERTIFICATES

- (a) Before performing the aero-medical examination, the AeMC or AME should:
 - (1) verify the applicant's identity by checking their identity card, passport, driving licence or other official document containing a photograph of the applicant;
 - (2) obtain details of the applicant's licence from the applicant's licensing authority if they do not have their licence with them;
 - (3) obtain details of the applicant's most recent medical certificate from the applicant's licensing authority if they do not have their certificate with them;
 - (4) in the case of a specific medical examination (SIC) on the existing medical certificate, obtain details of the specific medical condition and any associated instructions from the applicant's licensing authority. This could include, for example, a requirement to undergo a specific examination or test;
 - (5) except for initial applicants, ascertain, from the previous medical certificate, which routine medical test(s) should be conducted, for example electrocardiogram (ECG);
 - (6) provide the applicant with the application form for a medical certificate and the instructions for its completion and ask the applicant to complete the form but not to sign it yet;
 - (7) go through the form with the applicant and give information to help the applicant understand the significance of the entries and ask any questions which might help the applicant to recall important historical medical data; and
 - (8) verify that the form is complete and legible, ask the applicant to sign and date the form and then sign it as well. If the applicant declines to complete the application form fully or declines to sign the declaration consent to the release of medical information, inform the applicant that it may not be possible to issue a medical certificate regardless of the outcome of the clinical examination.

ANNEX IV – PART ATCO.MED – MEDICAL REQUIREMENTS FOR AIR TRAFFIC CONTROLLERS

SUBPART A - GENERAL REQUIREMENTS

- (b) Once all the items in (a) have been addressed, the AeMC or AME should:
 - (1) perform the aero-medical examination of the applicant in accordance with the applicable rules;
 - (2) arrange for additional specialist medical examinations, such as otorhinolaryngology or ophthalmology, to be conducted as applicable and obtain the associated report forms or reports;
 - (3) complete the aero-medical examination report form in accordance with the associated instructions for completion; and
 - (4) ensure that all of the report forms are complete, accurate and legible.
- (c) Once all the actions in (b) have been carried out, the AeMC or AME should review the report forms and:
 - (1) if satisfied that the applicant meets the applicable medical requirements as set out in this Part, issue a medical certificate, with limitations if necessary. The applicant should sign the certificate once signed by the AeMC or AME; or
 - (2) if the applicant does not meet the applicable medical requirements or if the fitness of the applicant is in doubt:
 - (i) refer the decision on medical fitness to the licensing authority as indicated in ATCO.MED.B.001; or
 - (ii) deny issuance of a medical certificate, explain the reason(s) for denial to the applicant and inform them of their right of a review according to the procedures of the competent authority.
- (d) The AeMC or AME should send the documents as required by <u>ATCO.MED.A.025(b)</u> to the applicant's licensing authority within five days from the date of the aero-medical examination. If a medical certificate has been denied or the decision has been referred, the documents should be sent to the licensing authority on the same day that the denial or referral decision is reached.

Regulation (EU) 2015/340

- (a) Limitations to class 3 medical certificates:
 - (1) If the applicant does not fully comply with the requirements for a class 3 medical certificate but is considered to be not likely to jeopardise the safe exercise of the privileges of the licence, the AeMC or AME shall:
 - (i) refer the decision on fitness of the applicant to the licensing authority as indicated in this Subpart; or
 - (ii) in cases where a referral to the licensing authority is not indicated in this Subpart, evaluate whether the applicant is able to perform their duties safely when complying with one or more limitations endorsed on the medical certificate, and issue the medical certificate with limitation(s) as necessary.
 - (2) The AeMC or AME may revalidate or renew a medical certificate with the same limitation without referring the applicant to the licensing authority.
- (b) When assessing whether a limitation is necessary, particular consideration shall be given to:
 - (1) whether accredited medical conclusion indicates that in special circumstances the applicant's failure to meet any requirement, whether numerical or otherwise, is such that exercise of the privileges of the licence is not likely to jeopardise the safe exercise of the privileges of the licence;
 - (2) the applicant's experience relevant to the operation to be performed.
- (c) Operational limitations
 - (1) The competent authority, in conjunction with the air navigation service provider, shall determine the operational limitations applicable in the specific operational environment concerned.
 - (2) Appropriate operational limitations shall only be placed on the medical certificate by the licensing authority.
- (d) Any other limitation may be imposed on the holder of a medical certificate if required to ensure the safe exercise of the privileges of the licence.
- (e) Any limitation imposed on the holder of a medical certificate shall be specified therein.

AMC2 ATCO.MED.B.001 Limitations to medical certificates

ED Decision 2015/010/R

LIMITATION CODES

(a) The following abbreviations for limitations should be used on the medical certificate as applicable:

Code	Limitation
TML	Restriction of the period of validity of the medical certificate
VDL	Wear correction for defective distant vision and carry spare set of spectacles
VXL	Correction for defective distant vision depending on the working environment
VML	Wear correction for defective distant, intermediate and near vision and carry spare set of spectacles

- (b) The abbreviations for the limitation codes should be explained to the holder of a medical certificate as follows:
 - (1) TML Time limitation

The period of validity of the medical certificate is limited to the duration as shown on the medical certificate. This period of validity commences on the date of the aero-medical examination. Any period of validity remaining on the previous medical certificate is no longer valid. The holder of a medical certificate should present him/herself for

ANNEX IV – PART ATCO.MED – MEDICAL REQUIREMENTS FOR AIR TRAFFIC CONTROLLERS

SUBPART B - SPECIFIC REQUIREMENTS FOR CLASS 3 MEDICAL CERTIFICATES

reassessment or examination when advised and should follow any medical recommendations.

(2) VDL — Wear corrective lenses and carry a spare set of spectacles

Correction for defective distant vision: whilst exercising the privileges of the licence, the holder of a medical certificate should wear spectacles or contact lenses that correct for defective distant vision as examined and approved by the AeMC or AME. Contact lenses may not be worn until cleared to do so by an AeMC or AME. A spare set of spectacles, approved by the AeMC or AME, should be readily available.

(3) VXL — Correction for defective distant vision depending on the working environment

Correction for defective distant vision does not have to be worn if the air traffic controller's visual working environment is in the area of up to 100 cm. Applicants who do not meet the uncorrected distant visual acuity requirement but meet the visual acuity requirement for intermediate and near vision without correction and whose visual working environment is only the intermediate and near vision area (up to 100 cm) may work without corrective lenses.

(4) VML — Wear multifocal spectacles and carry a spare set of spectacles

Correction for defective distant, intermediate and near vision: whilst exercising the privileges of the licence, the holder of a medical certificate should wear spectacles that correct for defective distant, intermediate and near vision as examined and approved by the AeMC or AME. Contact lenses or full-frame spectacles, when either correct for near vision only, may not be worn.

(5) VNL — Have available corrective spectacles and a spare set of spectacles

Correction for defective near vision: whilst exercising the privileges of the licence, the holder of a medical certificate should have readily available spectacles that correct for defective near vision as examined and approved by the AeMC or AME. Contact lenses or full-frame spectacles, when either correct for near vision only, may not be worn.

(6) VXN — Have available corrective spectacles and a spare set of spectacles; correction for defective distant vision depending on the working environment.

Correction for defective distant vision does not have to be worn if the air traffic controller's visual working environment is in the area of up to 100 cm. Applicants who do not meet the uncorrected distant and uncorrected near visual acuity requirements, but meet the visual acuity requirement for intermediate vision without correction and whose visual working environment is only the intermediate and near vision area (up to 100 cm) should have readily available spectacles and a spare set that correct for defective near vision as examined and approved by the AeMC or AME. Contact lenses or full-frame spectacles, when either correct for near vision only, may not be worn.

(7) CCL — Wear contact lenses that correct for defective vision

Correction for defective distant vision: whilst exercising the privileges of the licence, the holder of a medical certificate should wear contact lenses that correct for defective distant vision, as examined and approved by the AeMC or AME. A spare set of similarly correcting spectacles shall be readily available for immediate use whilst exercising the privileges of the licence.

ANNEX IV – PART ATCO.MED – MEDICAL REQUIREMENTS FOR AIR TRAFFIC CONTROLLERS

SUBPART B – SPECIFIC REQUIREMENTS FOR CLASS 3 MEDICAL CERTIFICATES

(8) RXO — Specialist ophthalmological examination(s)

Specialist ophthalmological examination(s), other than the examinations stipulated in this Part, are required for a significant reason.

(9) HAL — Hearing aid(s)

Whilst exercising the privileges of the licence, the holder of the medical certificate should use hearing aid(s) that compensate(s) for defective hearing as examined and approved by the AeMC or AME. A spare set of batteries should be available.

(10) SIC — Specific medical examination(s)

This limitation requires the AeMC or AME to contact the licensing authority before embarking upon renewal or revalidation aero-medical assessment. It is likely to concern a medical history of which the AME should be aware prior to undertaking the aero-medical assessment.

(11) SSL — Special restrictions as specified

This limitation may be considered when an individually specified limitation, not defined in this paragraph, is appropriate to mitigate an increased level of risk to the safe exercise of the privileges of the licence. The description of the SSL should be entered on the medical certificate or in a separate document to be carried with the medical certificate.

ANNEX IV – PART ATCO.MED – MEDICAL REQUIREMENTS FOR AIR TRAFFIC CONTROLLERS

SUBPART B – SPECIFIC REQUIREMENTS FOR CLASS 3 MEDICAL CERTIFICATES

GM1 ATCO.MED.B.075 Colour vision

ED Decision 2015/010/R

The means to demonstrate normal trichromacy include:

- (a) anomaloscopy (Nagel or equivalent). This test is considered passed if the colour match is trichromatic and the matching range is four scale units or less;
- (b) Colour Assessment and Diagnosis (CAD) test.

ATCO.MED.B.080 Otorhinolaryngology

Regulation (EU) 2015/340

- (a) Examination:
 - (1) A routine otorhinolaryngological examination shall form part of all initial, revalidation and renewal examinations.
 - (2) Hearing shall be tested at all examinations. The applicant shall understand correctly conversational speech when tested with each ear at a distance of 2 metres from and with his/her back turned towards the AME.
 - (3) Hearing shall be tested with pure tone audiometry at the initial examination and at subsequent revalidation or renewal examinations every 4 years until the age of 40 and every 2 years thereafter.
 - (4) Pure-tone audiometry:
 - (i) Applicants for a class 3 medical certificate shall not have a hearing loss of more than 35 dB at any of the frequencies 500, 1000 or 2000 Hz, or more than 50 dB at 3000 Hz, in either ear separately.
 - (ii) Applicants who do not meet the hearing criteria above shall be referred to the licensing authority and undergo a specialist assessment before a fit assessment may be considered. Initial applicants shall undergo a speech discrimination test. Applicants for a revalidation or renewal of a class 3 medical certificate shall undergo a functional hearing test in the operational environment.
 - (5) Hearing aids:
 - (i) Initial examination: the need of hearing aids to comply with the hearing requirements entails unfitness.
 - (ii) Revalidation and renewal examinations: a fit assessment may be considered if the use of hearing aid(s) or of an appropriate prosthetic aid improves the hearing to achieve a normal standard as assessed by fully functional testing in the operational environment.
 - (iii) If a prosthetic aid is needed to achieve the normal hearing standard, a spare set of the equipment and accessories, such as batteries, shall be available when exercising the privileges of the licence.

ANNEX IV – PART ATCO.MED – MEDICAL REQUIREMENTS FOR AIR TRAFFIC CONTROLLERS

SUBPART B – SPECIFIC REQUIREMENTS FOR CLASS 3 MEDICAL CERTIFICATES

(b) Applicants with:

- (1) an active chronic pathological process of the internal or middle ear;
- (2) unhealed perforation or dysfunction of the tympanic membrane(s);
- (3) disturbance of vestibular function;
- (4) significant malformation or significant chronic infection of the oral cavity or upper respiratory tract;
- (5) significant disorder of speech or voice reducing intelligibility;

shall be referred to the licensing authority and undergo further ORL examination and assessment to establish that the condition does not interfere with the safe exercise of the privileges of the licence.

AMC1 ATCO.MED.B.080 Otorhinolaryngology

ED Decision 2015/010/R

(a) Examination

- (1) An otorhinolaryngological examination includes:
 - (i) history;
 - (ii) clinical examination including otoscopy, rhinoscopy and examination of the mouth and throat;
 - (iii) clinical examination of the vestibular system.
- (2) Ear, nose and throat (ENT) specialists involved in the aero-medical assessment of air traffic controllers should have an understanding of the functionality required by air traffic controllers whilst exercising the privileges of their licence(s).
- (3) Where a full aero-medical assessment and functional check are needed, due regard should be paid to the operational environment in which the operational functions are undertaken.

(b) Hearing

- (1) The follow-up of an applicant with hypoacusis should be decided by the licensing authority. If at the next annual test there is no indication of further deterioration, the normal frequency of testing may be resumed.
- (2) An appropriate prosthetic aid may be a special headset with individual earpiece volume controls. Full functional and environmental assessments should be carried out with the chosen prosthetic equipment in use.

(c) Ear conditions

An applicant with a single dry perforation of non-infectious origin and which does not interfere with the normal function of the ear may be considered for a fit assessment.

ANNEX IV – PART ATCO.MED – MEDICAL REQUIREMENTS FOR AIR TRAFFIC CONTROLLERS

SUBPART B – SPECIFIC REQUIREMENTS FOR CLASS 3 MEDICAL CERTIFICATES

(d) Vestibular disturbance

The presence of vestibular disturbance and spontaneous or positional nystagmus requires complete vestibular evaluation by a specialist. Significant abnormal caloric or rotational vestibular responses are disqualifying. At revalidation and renewal aero-medical examinations, abnormal vestibular responses should be assessed in their clinical context.

(e) Speech disorder

Applicants with a speech disorder should be assessed with due regard to the operational environment in which the operational functions are undertaken. Applicants with significant disorder of speech or voice should be assessed as unfit.

GM1 ATCO.MED.B.080 Otorhinolaryngology

ED Decision 2015/010/R

HEARING

- (a) Speech discrimination test: discriminating speech against other noise including other sources of verbal communication and ambient noise in the working environment, but not against engine noise.
- (b) Functional hearing test: the objective of this test is to evaluate the controller's ability to hear the full range of communications that occur in an operational environment and not just through a headset or speaker.
- (c) Prosthetic aid: the functional hearing test to be carried out with the prosthetic aid in use is to ensure that the individual is able to perform the functions of his/her licence and that the equipment is not adversely affected by interference from headsets or other factors.
- (d) Pure-tone audiometry: testing at frequencies at or above 4 000 Hz will aid the early diagnosis of acoustic neuroma, noise-induced hearing loss (NIH) and other disorders of hearing. Particular attention should be paid in cases where there is a significant difference between thresholds of the left and right ear.

ATCO.MED.B.085 Dermatology

Regulation (EU) 2015/340

Applicants shall have no established dermatological condition likely to interfere with the safe exercise of the privileges of the licence held.

AMC1 ATCO.MED.B.085 Dermatology

- (a) Referral to the licensing authority should be made if doubt exists about the fitness of an applicant with eczema (exogenous and endogenous), severe psoriasis, chronic infections, druginduced or bullous eruptions or urticaria.
- (b) Systemic effects of radiation or pharmacological treatment for a dermatological condition should be evaluated before a fit assessment may be considered.
- (c) An applicant with a skin condition that causes pain, discomfort, irritation or itching may only be assessed as fit if the condition can be controlled and does not interfere with the safe exercise of the privileges of the licence.

ANNEX IV – PART ATCO.MED – MEDICAL REQUIREMENTS FOR AIR TRAFFIC CONTROLLERS

SUBPART B - SPECIFIC REQUIREMENTS FOR CLASS 3 MEDICAL CERTIFICATES

(d) In cases where a dermatological condition is associated with a systemic illness, full consideration should be given to the underlying illness before a fit assessment may be considered.

ATCO.MED.B.090 Oncology

Regulation (EU) 2015/340

- (a) After diagnosis of primary or secondary malignant disease, applicants shall be referred to the licensing authority and shall undergo satisfactory oncological evaluation before a fit assessment may be considered.
- (b) Applicants with an established history or clinical diagnosis of an intracerebral malignant tumour shall be assessed as unfit.

AMC1 ATCO.MED.B.090 Oncology

- (a) Applicants who have been diagnosed with a malignant disease may be assessed as fit provided:
 - (1) after primary treatment there is no evidence of residual malignant disease likely to interfere with the safe exercise of the privileges of the licence;
 - (2) time appropriate to the type of tumour has elapsed since the end of primary treatment;
 - (3) the risk of incapacitation from a recurrence or metastasis is sufficiently low;
 - (4) there is no evidence of short- or long-term sequelae from treatment. Special attention should be paid to applicants who have received anthracycline chemotherapy;
 - (5) satisfactory oncology follow-up reports are provided to the licensing authority.
- (b) Applicants receiving ongoing chemotherapy or radiation treatment should be assessed as unfit.
- (c) Applicants with a benign intracerebral tumour may be assessed as fit after satisfactory specialist and neurological evaluation and the condition does not compromise the safe exercise of the privileges of the licence.
- (d) Applicants with pre-malignant conditions may be assessed as fit if treated or excised as necessary and there is a regular follow-up.

in order to provide the reader with a comprehensive and unique reference document for the basic and each of the rating training courses. Training objectives are included in, and form an integral part of, each of the aforementioned AMC.

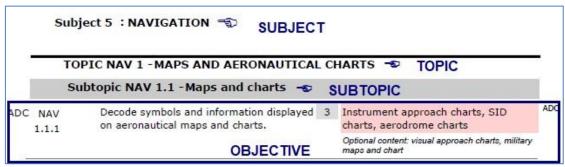

Figure 1: Layout of the syllabus

[applicable from 4 August 2024 - ED Decision 2023/011/R]

- (b) The following principles may be applied to the development of a training course that is based on any of the syllabi:
 - (1) The structure of the syllabi and the order of the objectives contained therein is neither intended to convey a pedagogical sequence nor to indicate a relative level of importance.
 - (2) No objective from the basic training syllabus is repeated as 'a refresher' in the rating training syllabi.
 - (3) The number of objectives contained within a subtopic does not necessarily signify how long it should take to teach that subtopic. For example, a subtopic containing five relatively straightforward objectives may take a shorter time to be taught than another subtopic containing two complex objectives.

2. Structure of the objectives

- (a) An objective consists of three elements:
 - (1) The corpus, which is a description of the required performance. It always contains an action verb to ensure that the outcome is observable. The action verb is always associated with a defined taxonomy.
 - (2) The level, which indicates numerically the taxonomy of the action verb.
 - (3) The content, which may be implicit or explicit. The explicit content is written in the content field, while the implicit content is not but, instead, is implied in the corpus of the objective and other elements (syllabus, subject, etc.). Content that is a required part of the objective is written in the red-shaded field. Optional content, written in italics, may be used if considered appropriate.

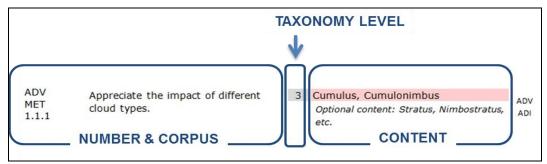

Figure 2: Layout of an objective

[applicable until 3 August 2024 - ED Decision 2019/023/R]

(3) The content, which may be implicit or explicit. Explicit content is written in the content field, while implicit content is not but, instead, is implied in the corpus of the objective and other elements (syllabus, subject, etc.). Content that is a required part of the objective is written in the red-shaded field. Optional content, written in italics is provided to help training designers develop their training material and may suggest possible reference documents that could be used and/or elaborate on the content with specific examples. With or without explicit content, the objective needs to be covered since the implementation is implied in its corpus (text of the objective) and associated context (Subtopic/Topic/Subject/ Rating).

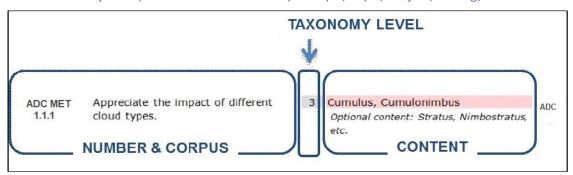

Figure 2: Layout of an objective

[applicable from 4 August 2024 - ED Decision 2023/011/R]

3. Repeated and common objectives

- (a) Repeated and common objectives are only applicable to rating training.
- (b) To the right of each objective, there is an indication of which other ratings contain this particular objective. If the rating is indicated in red italics, it notifies the reader that the objective(s) is (are) verbatim in each rating; however, the objective numbers are different. This indication is the first step to help the training providers identify the potential commonalities between the various syllabi. As a second step, the training provider must determine, at the level of local implementation, whether the objective is to be regarded as repeated or common.

Figure 3: Indication of the ratings to which a particular objective applies

[applicable from 4 August 2024 - ED Decision 2023/011/R]

3.1 Repeated objectives

All the objectives appearing in a syllabus are implicitly appropriate to this syllabus. As a consequence, objectives may be repeated 'verbatim' in different rating syllabi and nevertheless specify a different performance. The reader always needs to mentally add the sentence 'in this syllabus context' at the end of each objective.

For example, the objective 'use approved phraseology' is repeated (same level, same corpus, same content) in all the syllabi but is different because the context is different in each syllabus (a learner that is able to use approved phraseology for en-route traffic will need additional training before mastering the phraseology in the provision of aerodrome control).

3.2 Common objectives

- (a) Common objectives are verbatim the same objectives that appear in more than one rating syllabi in the same context so that they do not need to be taught again in case of combined or successively organised courses.
 - For example, the objective 'describe the human information-processing model' is common for all the syllabi because the context is non-specific and is, therefore, not determined by the type of rating.
- (b) As a general principle, the rating subject 'Human Factors' is identical in each of the rating training syllabi and can be considered as containing common objectives because the context is always the same. This means that the rating training objectives relating to Human Factors need to be taught only once. If a learner acquires an additional rating, that learner would not be required to repeat the Human Factors objectives.

4. Action verbs that support the taxonomy for training objectives

- (a) The five taxonomy levels should be understood to have the following levels of complexity:
 - (1) Action verbs for Level 1

Level 1 — A basic knowledge of the subject. It is the ability to remember essential points, to memorise data and retrieve it.

- (b) Application of taxonomy levels to practically based objectives
 - (1) Objectives at taxonomy level 3 or higher, which are of a practical nature, related to all subjects except ATM, may be achieved by any suitable type of practical training methods, e.g. hands-on, plotting on charts, etc.
 - (2) Objectives at taxonomy level 3 or higher, for the ATM subject (basic and rating), are practical by nature and require the integration of several knowledge areas and skills at the same time, e.g. vectoring of an aircraft requires knowledge and skills in the areas of radiotelephony, aircraft performance, navigation and radar theory. Therefore, ATM level 3 objectives should be achieved through the use of a part-task trainer or a simulator.
 - (3) ATM level 4 objectives should be achieved for the most part through the use of a simulator. A part-task trainer, which presents operational situations at an enforced pace, may be used to achieve some ATM level 4 objectives.
 - (4) ATM level 5 objectives should be achieved through the use of a simulator.
