[Project Update Webinar - Presentation - 28 November 2023](#)

Description

This webinar is organised to present an update on EASA's research project, 'Impact of security measures on safety'. This project has been implemented by EASA to better understand the scope and nature of interdependencies between aviation safety and security.

As the project's inaugural year draws to a close, this webinar will offer attendees a comprehensive insight into the project's progress thus far. It will encompass an overview of the project deliverables to date, including preliminary findings from Task 1 'Identifying safety/security dependencies'. Additionally, the webinar will provide a concise preview of upcoming project milestones and detail how stakeholders can actively participate in the study's research activities.

Agenda

Registration

This webinar is open to European aviation stakeholders. All persons who wish to attend must use their professional email addresses for registration purposes. Registrations that are not clearly linked to an official email address from an aviation-related organisation will be rejected. The webinar is hosted by CAA International on behalf of EASA using WebEx by Cisco. After registering [here](#), all webinar-related email communications will be addressed by CAA International.
