

Implementation support to stakeholders

What is the EASA plan to ensure wide communication towards ATM GE providers and common understanding of the regulation framework?

Answer

EPAS 2023-2025 contains 3 new tasks, 2 for the regulatory activities (covering the detailed specifications, AMC and GM material), and also 1 task requiring implementation support to Stakeholders (National Supervisory Authorities). EASA is also thinking about additional ways that materials can be provided to any stakeholder to facilitate common understanding (e.g. Specific trainings and presentations, FAQs, etc).
