Description

The International Cooperation Forum is an exchange platform for the CAAs and the regional organisations which have adopted or adapted European aviation safety rules. It provides an opportunity for a dialogue with EASA's international partners on global aviation safety issues.

The ICF/5 discussions will cover a broad spectrum of topics with high-level issues such as better and more performance-based regulations and practical aspects, such as ATM technologies and technical cooperation between EASA and its partners, including challenges faced by Regional Safety Oversight Organisations (RSOO) and training needs of developing states.

ICF/5 builds upon the experience gained since the first such event in 2008 and the excellent record of cooperation between EASA and states and partners worldwide

The participation in the ICF/5 is open to states and regional organisations. If you are interested

to participate please send an email to [easa-forum \[at\] easa.europa.eu](mailto:easa-forum@easa.europa.eu)
