

European Union Aviation Safety Agency

## FAQ n.19371

### FAQs:

[STCs](#), [General Aviation](#)

### Question:

**My aircraft has been modified in the USA by Form 337 action. Can EASA accept this?**

### Answer:

EASA accepts alterations on non-critical components that are substantiated via Form 337, as detailed in the [EASA-FAA Technical Implementation Procedure \(TIP\) rev 5](#), paragraph **3.2.8.2**

### **EASA Acceptance of FAA Alteration Data:**

“Except for alterations on critical components, FAA-approved or accepted alterations per 14 CFR Part 43 installed on a used aircraft exported from the U.S., regardless of the State of Design of the aircraft, **are considered approved by EASA** at the time of import to the European Union. **EASA shall accept** such FAA alteration data when substantiated via an appropriately executed FAA Form 8110-3, FAA Form 8100-9, **FAA Form 337** or logbook entry.

Alterations on critical components must be EASA-approved via STC, in accordance with **TIP paragraph 2.2** (Design Approval Procedures for Supplemental Type Certificates (STCs)).

An FAA STC whose installation is documented on a Form 337 must be approved by EASA in accordance with **TIP paragraph 2.2.**”
