- deleted text is marked with ~~strike-through~~;
- new or amended text is highlighted in grey; and
- an ellipsis (...) indicates that the remaining text is unchanged in front of or following the reflected amendment.

Appendix I to Annex IV to ED Decision 2003/019/RM is hereby amended as follows:

**APPENDIX I**  
**AIRCRAFT TYPE RATINGS**  
**FOR PART-66 AIRCRAFT MAINTENANCE LICENCES**

The following aircraft type ratings should be used to ensure a common standard throughout the Member States.

The inclusion of an aircraft type in the licence does not indicate that the aircraft type has been granted a type certificate under the Basic Regulation and its Implementing Rules; this list is only intended for the maintenance purposes.

In order to keep this list current and the type ratings consistent, such information should be first passed on to the Agency using the Rulemaking Enquiry form (<http://easa.europa.eu/webgate/rulemaking-enquiry/>) in case a Member State needs to issue a type rating that is not included in this list.

Notes on when the licences should be modified:

When a modification is introduced by this Decision to an aircraft type rating or to an engine designation in the rating which affect licences already issued, the ratings on the Aircraft Maintenance Licences (AMLs) may be modified at the next renewal or when the licence is reissued, unless there is an urgent reason to modify the licence.

Notes on aircraft modified by Supplemental Type Certificate (STC):

- ~~It is not the intention of this document to include all aircraft modified by STCs because a great number of STCs were approved before 2003 and are unknown to the Agency.~~
- This Appendix I intends to include the type ratings of aircraft resulting from STCs for installation of another engine. These STCs are those approved by the Agency and those approved by the Member States before 2003 and grandfathered by the Agency. Other STCs than those for engines are not considered.
  - Example: The STC from Jet Aviation Basel approved by the LBA for replacement of GE CF 700 by Honeywell TFE731 on Fan Jet Falcon Series E results in a new rating called Fan Jet Falcon E (Honeywell TFE731).
- However, the ratings from STCs for installation of an engine:
  - on part of the original airframe models, or
  - from the same manufacturer, but of a type very similar to the original one,

have not been added because they would have resulted in an already existing rating.

Examples:

- The STC from SILVERHAWK CONVERSIONS approved by EASA for installation of PT6A-135A on Beech C90, C90A and E90 would result in the Beech C90/C90A/E90 (PWC PT6) rating, but this is not listed because it is already included in the original Beech 90 Series (PWC PT6) rating.
- The STC from Air-Service Wildgruber GmbH approved by LBA for replacement of PWC PT6A-20 by PWC PT6A-27 would result in the De Havilland DHC-6-100 (PWC PT6) rating, but this is not listed because it is already included in the De Havilland DHC-6 (PWC PT6) rating in the table.
- At the time of publication of this Decision, the Agency has not received all the information concerning STCs that have been previously approved by the Member States. As a result, not all STCs are considered by this publication.
- When the STC concerns the installation of an engine that falls under a different subcategory, e.g. replacement of a piston engine by a turbo-prop (a turbine engine), then the new type rating needs to be listed in the new subcategory.
- In case a type rating resulting from an STC has not been yet defined by the Agency, the latter shall be contacted by the competent authority to agree on a new type rating to be used.
- ~~When an aircraft has been modified by an STC for installation of another engine, the Part-66 type rating of this aircraft may change i.e. from Group 2 to Group 1. This is not reflected in this document. In case the applicant to a licence faces such a case, he/she or his/her competent authority can inform the Agency and a new type rating will be defined by the Agency.~~

In the following tables:

- The column '*TC Holder*' includes the TC holder as defined in the Type Certificate Data Sheets (TCDS) (EASA, FAA or other) or the Specific Airworthiness Specifications (SAS).
- The column '*STC Holder*' includes the STC holder as defined in the Supplemental Type Certificate Data Sheets (STCDS) (EASA, FAA or other).
- Some TC holders' designations have been corrected to add the information : 'Aircraft with an SAS', this means that the aircraft listed under this TC holder designation is considered an 'orphan aircraft'.
- In Group 3, a third column has been added which is called 'Type of structure' and which intends to assist the competent authorities in identifying the experience required for this type with a view on removing existing limitations on the licence.
- Wooden structure covered with fabric is considered to fall under wooden structure. For Aeroplanes with a combination of structures, e.g. metal tubing fuselage and wooden wings, both experiences 'metal tube covered with fabric' and 'wooden structure' are required.
- In Group 3, a fourth column has been added which is called 'MTOM' and which intends to assist the competent authorities in identifying the aeroplanes types where the Maximum Take-Off Mass (MTOM) is:
  - above 2T and is subject to a B1.2 licence, or
  - 2T and below and is subject to a B1.2 or B3 licence.
