

# EASA HIGH LEVEL CONFERENCE

**JEDA Competence Group 1**  
**European regulation implementation**  
**22 October 2024**

Preliminary survey results

# Agenda

1. Why this survey? Who responded?
2. Specific insights
3. Outlook

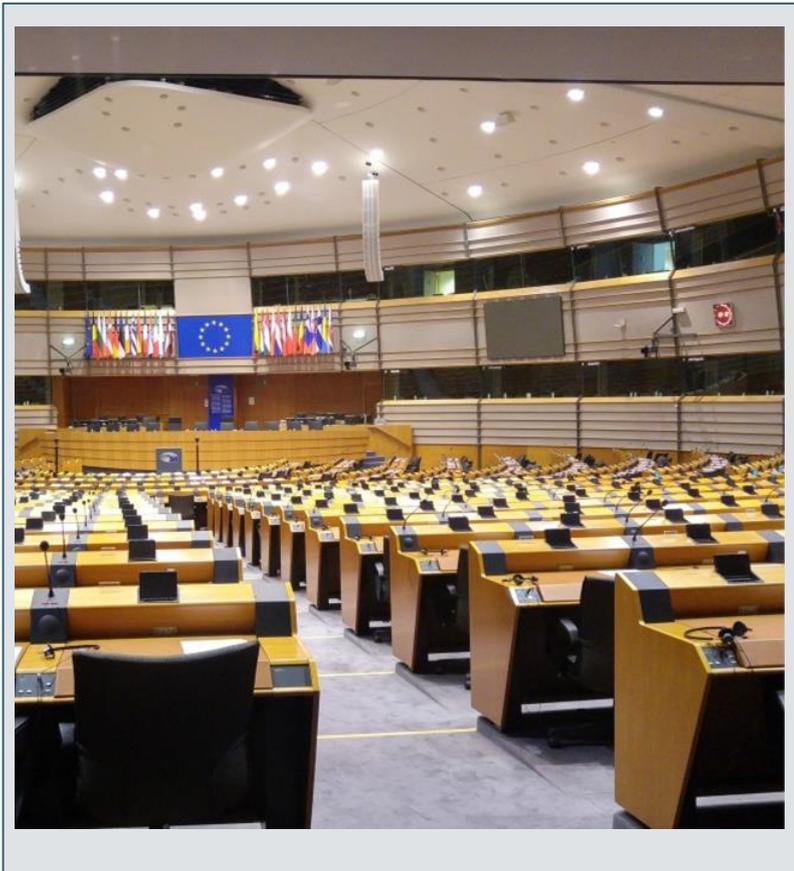

## Speakers

- Philippe BOYADJIS, JEDA Vice-President
  - Stefan HRISTOZOV, JEDA Secretary

## With JEDA Competence Group 1 Members (*thanks!*)

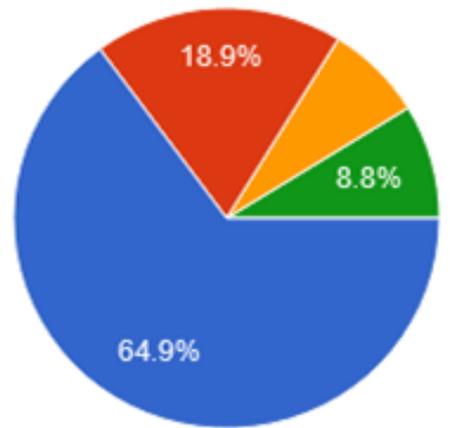

- Armin Ambühl
- Julie Garland
- Pierre-Alain Marchand
  - Vidmantas Kairys

# Why this survey?

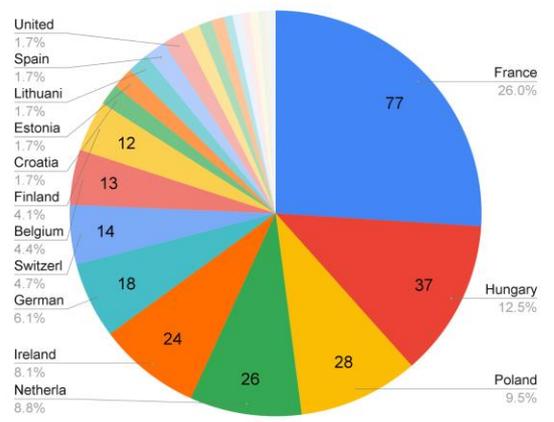

- Obtain **feedback from operators and all stakeholders** regarding the implementation of European drone regulation
- Enable **EASA** to facilitate listening to drone operators, by **centralizing feedback**,  
Part of 2024 EASA/JEDA  
MEMORANDUM OF COOPERATION
- Explore with the drone community concrete **ways of improving the regulation** to support the development of the European drone sector

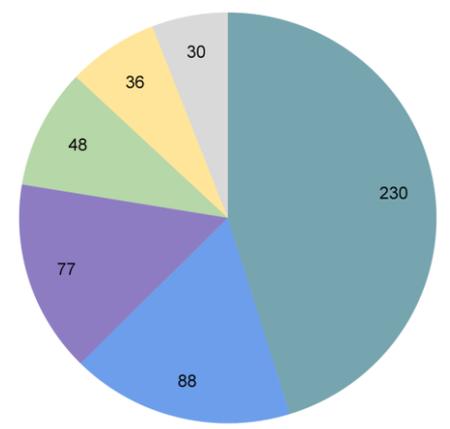

# Who responded?

- 300 responses, with distribution by **structure size**
- Micro (1-9 employees)
- Small (10-49 employees)
- Medium (50-249 employees)
- Large (250+ employees)

- Responses from **25 countries**
- Broad country representation achieved

- Diversity reflecting **diversity of market activities**
- Operator
- Service provider
- Training organization
- Manufacturer
- Research Institution
- Other

- 250 / 300 respondents have left very detailed comments
- Processing still ongoing, giving you **first trends today**

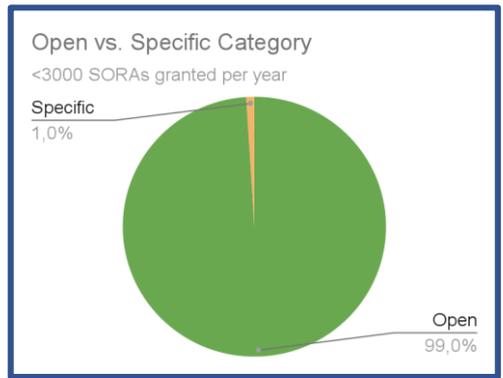

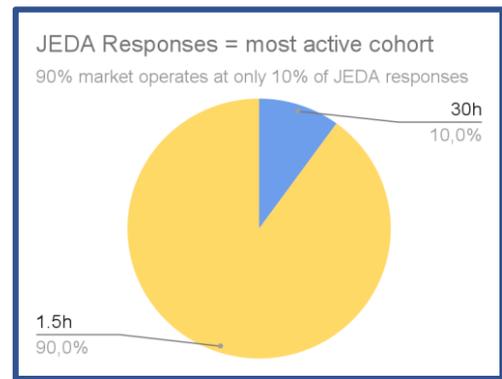

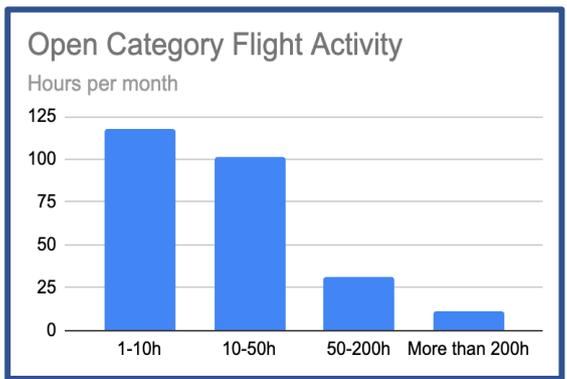

# Open Category - Flight Activity Data

**25h: Median flight hours**  
From survey, per month

**Median operator flies much less than median JEDA survey**  
Assumption

**1.6M registered operators**  
From EASA IAM (incl. recreational)

**99% activity in Open Cat.**  
From EASA IAM (incl. recreational)

# Highlights - Topic 1

## Inconsistent implementation across member states

### Summarized challenges

- ❖ **Inconsistent implementation** of drone regulations across EU countries.
- ❖ **Additional** country-specific **restrictions** and complicated cross-border operations.
- ❖ Complexity & lack of enforcement → **unfair competition** by non-compliance.

### Survey quotes

- “The harmonization was intended to make operations easier, [...] **each country places its own rules on top of the EASA rules**, it becomes an impossible web of rules, which has not helped at all.”
- “[...] each NAA then puts there own little spin them to comply with their countries laws [...]”
- “please align UAS regulation within all EU countries. I can't understand that we still have different regulation in [...]”
- “**Every country interprets regulations in their own manner and use this to restrict operations.** For example [...] insistence on Flight termination systems, [...] BVLOS outside atypical airspace is forbidden [...] “
- “This creates a market for **smaller independent operators to assume the risk of breaking the rules** [...]”
- “The effort [...] is currently so high (including generic SORA) that providers paying less attention to compliance often **offer at significantly lower prices.**”

# Highlights - Topic 2

## Cost and complexity not appropriate to the risk

### Summarized challenge

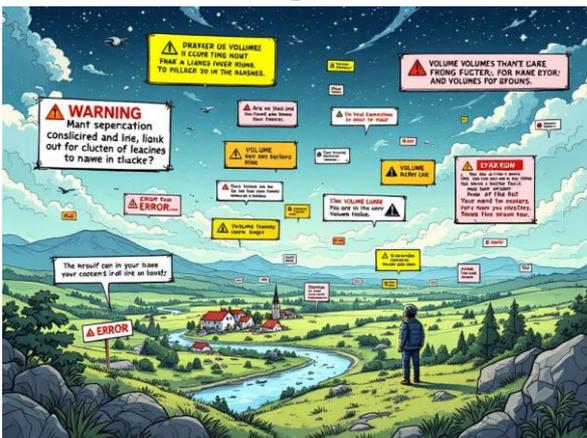

- ❖ Cost & complexity of regulations **disproportionate to actual risks**.
- ❖ Restrictions in Open Category and buffer zones hindering **business operations**.
- ❖ Time-consuming and costly **authorization processes discouraging investment**.

### Survey quotes

- “The regulations are **so complex [...] had to hire an external consultant at huge expense**”
- “Large corporations can not utilize the technology [...] highly unprofitable.”
- “Restrictions in Open Category for flights over uninhabited areas are non sense and are killing business for drone operations.”
- “Clearly defining the population densities for the Open A3 150m buffers”
- “NAAs take **months to actually get permissions in place - you can run out of money before getting a permission to operate in the specific category**”
- “Process of applying permissions from CAA takes too much time with SORA methodology.”
- “From an economic perspective, the legislation **discourages investment** in advanced drone technology.”

# Highlights - Topic 3

## Geozones - and progress to advanced use-cases

### Summarized challenges

- ❖ **Excessive Geozones** inhibiting operations in Open & Specific
- ❖ **Limited geographical flexibility** for operational permissions (**SORA**).
- ❖ Not fast enough progress on scalable progress (BVLOS), as well as common **specific use cases** like agriculture, tethered and swarming drones.

### Survey quotes

- **“Excessive geozones** due to the authority for airspace management being delegated to local authorities”
- “[...] too many geozones with arbitrary rules. “
- “[...] **SORA or PDRA but those are location bound**”
- “[SORA] is required in too many circumstances that already have switched from rare to popular (agricultural, swarming).”
- “The SORA process is killing industry”
- **“BVLOS: each country has its own rules.** [...] different requirements that are not always compatible.”
- “It is more straightforward for me to go to an airport and hire an airplane with my PPL than it is to fly a drone in many instances.”
- “Make sure that the Specific category not overregulated. Ensure that the set safety level goals are achieved, but **not overachieved by more and more rules. You will otherwise kill an industry or let it move abroad the EU.**”

## Survey quotes

- “” Just because we face a **challenge** we don't see it as something negative. Some of the regulatory challenges has put out organization at test and **made it possible** to get where we are today””

- ❖ **Great job done since 2019** regulation
- ❖ Operators and other stakeholders provided **feedback through this survey**
- ❖ With members of **JEDA, EASA** and all our **partners**
- ❖ Let's work together to identify the **challenges and proposals**
- ❖ **within a short time, let's improve collectively drone industry and activities**

**Thank you**

**Go raibh maith agat**

**Merci vilmal**

**Köszönöm szépen**

**Grazie**

**Kiitos**

**Multumesc**

**Merci**

**Aitäh**

**Faleminderit**

**Hvala**

**Vielen Dank**

**Obrigado**

**Dank u wel**

**Dèkui**

**Paldies**

**Gracias**

**Ευχαριστώ**

**Благодаря**

**Villmools merci**
